

WrenchWay School Connect

Local Solutions to a National Problem

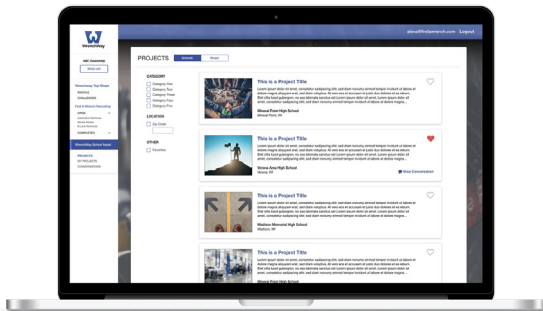

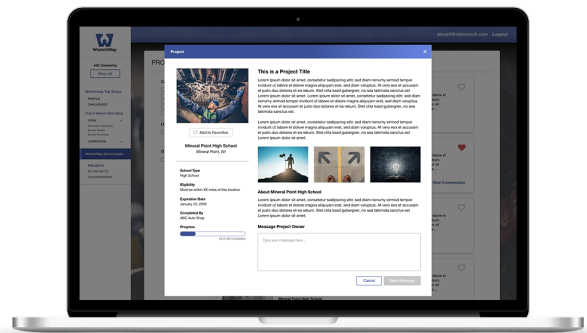

WrenchWay School Connect is a free tool that makes it easier for schools to connect with local shops and dealerships, and get the resources they need to attract students to technician programs and educate them about the industry.

How It Works

Post a New Topic

Schools post requests for anything they could use to help improve their programs. Some examples include:

- Speakers
- Shop tours
- Tool donations
- Career fair participants

Scan Open Projects

Shops and schools scroll through all of the open projects to see if there is a match. Shops may see an open project from a school in their area and choose to help out. Or, a school could see a local shop willing to donate something that they could use.

Complete the Project

Shops and schools can message back and forth directly on the site to ask questions, coordinate logistics, etc. It's really that simple.
